

HOW NEURONOMICS DEVELOPED A TRADING STRATEGY WITH COMPUTATIONAL NEUROSCIENCE

CLIENT SPOTLIGHTS

The combination of access to innovative new markets, the absence of any counterparty risks, and the full bankability, even for exotic assets, were three main arguments, why we chose GENTWO Digital.

THE SOLUTION

Issuer:

NRO Issuer Limited

Product:

Neurofin Digital Assets
AMC

THE CLIENT

Neuronomics

Neuronomics is a Swiss asset management company utilizing computational neuroscience and quantitative finance.

THE CHALLENGE

Use neuroscience to exploit inefficiencies in the financial markets

Neuronomics uses computational neuroscience to develop an algorithm that lets them exploit inefficiencies in the financial markets.

They applied it to the crypto-market which is driven by psychological factors and neurological processes and remains inefficient.

It's not easy to create a product that will allow you to have exposure, not just to the one or two leading cryptocurrencies, but to more than 30 cryptocurrencies that we trade.

THE OPPORTUNITY

Securitize an AMC where 30+ cryptocurrencies are traded

The traditional custody setup only works for the biggest cryptocurrencies, but Neuronomics had exposure to more than 30 crypto-assets.

They securitized an actively managed portfolio, where these cryptocurrencies are traded according to their algorithm based on computational neuroscience and quantitative finance.

Our models aren't created from market data but computational neuroscience. And this allows us to detect market patterns that we believe will remain as long as humans are still a factor in the market.

THE RESULT

Allow investors to have direct exposure to their strategy without taking on any counterparty risk

GENTWO Digital's Actively Managed Certificate (AMC) helped Neuronomics make a managed crypto strategy fully bankable and accessible through a Swiss ISIN.

It allowed them to create an interesting instrument for diversification that is so far decorrelated from any of the traditional markets.

We take this domain-specific knowledge of neuroscience, and we transfer it into quantitative finance, which is something absolutely unique.

THE NEXT GENERATION SECURITIZATION PLATFORMS

GENTWO Digital offers Securitization of
All Digital Assets as a Service.

Learn how we can help you turn all your
crypto strategies into investable assets.
